

**Diagnosis:**

Resected colon with a broad, ulcerated, moderately differentiated adenocarcinoma of colorectal type, with infiltration of the pericolic adipose tissue, lymphangiosis carcinomatosa with tumor and seven local lymph node metastases. Tumor-free colon resection margins. Tumor-free mesenteric resection margin. The remaining mucous membrane of the colon displaying a circumscribed, ulcerous defect with remains of a tubular adenoma with moderate epithelial dysplasia, as well as a further small tubular adenoma, likewise with moderate dysplasia (synonymously: mild intraepithelial neoplasia).

Stage of tumor: pT3, pN2 (7/28), MX; G2, L1, V0, local R0
